

## New Offices for City of Canton Water Department

HEI Engineering Group recently completed a 4,000SF renovation for the City of Canton Water Department located in downtown Canton. The new floor plan includes both private and open offices, conference room, break room, public waiting room, teller work stations, restrooms and storage.

The new HVAC system consists of (2) constant volume gas-fired/DX roof-top units. A few fan-powered terminal units with electric reheat are installed to serve perimeter private office for improved comfort due to the continuous glass windows, especially along the “south west” exposure. Exposed ductwork and linear slot diffusers are painted black in the Break Room which creates a very attractive look while maintaining an “open” feeling within the space.

Miscellaneous exhaust fans and supplemental heating devices also improve the environment of the facility.

HEI Engineering Group is proud to team up with Motter & Meadow Architects on this successful project.
