

## *Community One Credit Union, Canton Ohio*

The recently completed 5,000 sq. ft., 2-story new addition to the Community One Credit Union in Jackson Township more than doubled the office space of this existing facility.

The HVAC consists of light commercial forced air systems including high efficiency gas furnaces with duct mounted humidifiers. Over-heated data closets are no longer a concern as in the past with the installation of wall mounted ductless mini-split systems.

A new elevator is the main tie-in point between the existing and the new building areas. It provides access to both floors and to the existing basement level.

This project also includes modifications to the existing ductwork & air distribution to accommodate renovations to the existing Boardroom, Lunchroom and Public Lobby, and to improve occupant comfort in other areas.
